Importing necessary modules

In [1]:

```python
import findspark
findspark.init()
```

In [2]:

```python
import pyspark
import sys

from pyspark import SparkContext, SparkConf
```

Creating a spark context

In [3]:

```python
sc = SparkContext("local","PySpark Word Count Exmaple")
```

Reading the inputfile and storing each word in the file as words

In [4]:

```python
words = sc.textFile("F:\Docs\Big data\Assignment\Assignmnet 4\Dataset\input.txt").flatMap(lambda l
ine: line.split(" "))
```

We are counting the occurance of each word

In [5]:

```python
wordCounts = words.map(lambda word: (word, 1)).reduceByKey(lambda a,b:a +b)
```

Saving it as a text file

In [6]:

```python
wordCounts.saveAsTextFile("F:\Docs\Big data\Assignment\Assignmnet 4\Dataset\output")
```

Printing the counts

In [7]:

```python
print(wordCounts.collect())
```

```
